

## MEASUREMENT SEMINAR

MONTERREY, MEXICO
November 2 to 4, 2002

## IAAF MEASUREMENT SEMINAR <br> MONTERREY, MEXICO

November 2 to 4, 2002

By request from the Mexican Athletic Federation (FMA\}, Lenford Levy from the regional IAAF requested to Pete Reigel (Americas measurement Administrator) a measurer that could give a seminar in Mexico. These conversations started on March of 2002; on the dates mentioned above we finally held the seminar on the volunteer measurer was Pedro Zapata (B measurer from Puerto Rico) from here on Pedro. The seminar was organized by Luciano Ramirez which has attended a couple seminars in the past and was appointed by FMA for the overall coordination of the seminar. Twenty participants were gathered representing all regions from Mexico, they were coaches, race directors, accountants, triathletes and well rained people on the athletics environment.

## Participants

| \# | Name | City | Country |
| ---: | :--- | :--- | :--- |
| $\mathbf{1}$ | Pedro Zapata Instructor | Carolina | Puerto Rico |
| $\mathbf{2}$ | Luciano Mendoza Ramirez Organizer | Monterrey | Mexico |
| $\mathbf{3}$ | Jose Guadalupe Lopez Salazar | Cancun | Mexico |
| $\mathbf{4}$ | Rafael Valenzuela Ortega | Xalapa | Mexico |
| $\mathbf{5}$ | Juan Meave Melchor | Saltillo | Mexico |
| $\mathbf{6}$ | Felipe Suarez Arias | Toluca | Mexico |
| $\mathbf{7}$ | Angel Garcia Ramirez | Tampico | Mexico |
| $\mathbf{8}$ | Jose Antonio Baltazar Pallares | Tijuana, B.C. | Mexico |
| $\mathbf{9}$ | Arturo Duran Sanchez | Tlaxcala, Tlax | Mexico |
| $\mathbf{1 0}$ | Gerardo Cervantes Padilla | Monterrey | Mexico |
| $\mathbf{1 1}$ | Daniel Pinto Aranda | Merida | Mexico |
| $\mathbf{1 2}$ | Regulo Barbosa Muniz | Canta | Catarina,N.L. |
| $\mathbf{1 3}$ | Javier Noriega Guzman | Chihuahua | Mexico |
| $\mathbf{1 4}$ | Cecilia Miranda Mijangos | D.F | Mexico |
| $\mathbf{1 5}$ | Cristina Sliva Martinez | Quintana Roo | Mexico |
| $\mathbf{1 6}$ | Jose Luis Hernandez Domninguez | Tlaxcala | Mexico |
| $\mathbf{1 7}$ | Raul Ortega Lopez | JALISCO | Mexico |
| $\mathbf{1 8}$ | Martin de los Santos Jimenez | JALISCO | Mexico |
| $\mathbf{1 9}$ | Eliud Azarrel Gutierrez Fuentes | D.F | Mexico |
| $\mathbf{2 0}$ | Rodrigo Ramirez Puente | N.L. | Mexico |
| $\mathbf{2 1}$ | GABRIEL JUAREZ GARCIA | SAN LUIS | Mexico |
| $\mathbf{2 2}$ | REGINO GALVAN | POTOSI | Mexico |
|  |  |  | Mexico |
|  | Assistant | MUEVO LEON |  |

The seminar was held on Monterrey, Mexico on the Hotel Antaris Cintermex. I arrived around 8:00 PM at the airport and Maximo was waiting for me, from the airport we drove about 20 min . to the hotel and met Luciano Ramirez (seminar organizer), at that moment everything seemed wonderful for the seminar, nice hotel, great classroom with the table's chairs and Board already set up. We got together with others participants and enjoy a dinner at the hotel restaurant; all meals were served for all participants in a delicious Mexican traditional cousin in a buffet style, all you can eat. All my plates were in a combination with a lie for drink. (1 pound of tortillas with a diet coke)

Luciano managed to select a perfect setting for a course, the hotel classroom, the coffee Breaks and the hands on training site. On Saturday morning all participants were at 8:00 AM sharp at the classroom, Maximo and Luciano welcome everyone, after my self presentation everyone was ask to present themselves.

Students were first introduced with a little history of how the Calibrated Bicycle Method was developed and the importance of the SPR (shortest possible route). The Jones Counter was illustrated, we went thru all the steps needed for a good measurement of courses and performed various exercises to determine the constants from the calibrations course. A theorical measurement was practiced on the classroom starting on the phylosofy of the calibration course and temperature correction to the steel tapes, proper technique to measure and document the calibration course, exercises on calibrations rides to determine the constants and course theoretical measurement. We discussed the requirements for record quality courses, this topic raised many questions but all students understood why the requirements. The SPR plus SCPF were explained a lot. Around 10:30 AM we walked to the Parque Fundidora, now a park but before a race car course and before, a steel manufacturing industry.

We had rain or mist of rain all the time and we decided that it was too wet to practice the layout of the calibration course in the outdoors. Withing the park an old shed of about 200 meters long was selected but only 120 meters were usable. Teams of two students were form and they practiced the philosophy for a good measuring of the calibration course. Only one measure was done by each student but everyone was able to measure.

We used 3 steel tapes, one of 50 meters and 2 of 30 meters. One of the 30 mt . was missing the beginning of it and it was hard for group 19/7 to determine the right measurement. Everyone was happy with this lesson.

Lunch time came along; we all walked back to the hotel to have a taste of the great Mexican cuisine once more. Two PM was the time set for meeting again. After lunch Luciano, Maximo and I headed back to the park and measured twice the official calibration course that we intent to use on the afternoon. With the collaboration of other students we were able to use a plastic tape for the intervals. The course was laid on the straight way of the race track and marked at beginning and finish points.

At 2 PM we meet all students back on the hotel lobby were all the bicycle were waiting for us. The bikes were not on $100 \%$ shape but they served their purpose. They were loaned by a local repair shop witch had them laying around, my bike and another student bike suffered broken pedals, so long for those two. At the hotel lobby entrance students with the assistance of Luciano and Pedro installed and tested the Jones counters.

We all walked back to the wonderful training site (old race car track) were I was told it was 3,400 meters long. No cars are allowed on the track, just runners and bike riders, it couldn't be better. We reached that starting line of the calibration point witch happened to be the starting line of the practice course for the measurement. We all got in the bikes and made a recognition ride to warm up around the course, it was just beautiful. I noticed great examples of tight cornering from left to right and right to left plus straightway. Pedro explained the technique of riding a bike over the calibration course and here they went, the calibration course was so wide that we manage to fit about 8 students at a time.

All students performed their calibration passes and they were enjoining it so much that they performed their each individual calculation of their constant immediately after the run. I saw good rides and no so good rides, one student has not ride a bike in the last 11 years and other admitted that they were shaky sometimes specially on the start.

From this point we started measuring the course. Students started between each other with intervals of about 3 min . They were in their own, after every one finished with the measurement we performed the last 4 post-calibration rides. Every one was anxious to see their results, we got back to the training room and I explained the whole process of my calculations in order to obtain the course measurement. All participants performed their respective calculations by hand and Pedro obtained everyone's data into his computer to verify each one figures. Some of the students made mistakes on the constant calculations and other on the multiplication but Pedro was able to catch all of them and explained each one were they have mistaken.

Student number 3 told Pedro that his counter was not working for a while and he noticed the situation and fix it during the ride. Student 5 did not follow the SPR at all. Student 17 did not follow well the course thinking on SPR, he had problems riding the bike.

Spanish writing reference material was given to each student that night. Saturday work section ended about 9:00 PM. Luciano selected a group of 10 riders for what Pedro called the final exam, on Sunday we are to ride a course of aprox. 21 k and the other students not riding were to follow on car to oversee the measurement.

Around 8:00 Am on Sunday we were at the calibration course, performed the calibration and headed for the final exam starting line. All students were eager to start; we had the escort from a police car, police bike and two other cars from the participants. Luciano led the group at a considerable speed and Pedro dropped to the back to take advantage from the lead to make the shortest possible route and show it to the students that were following him. This instruction proved to be a success, since the students following Pedro were able to compare the riding thru traffic technique as well as the shortest possible route philosophy.

We performed the final post-calibration runs and headed back to the hotel. The Jones counters were removed from the bikes and each participant kept their own. After a 30 min. shower break and back in the classroom we performed the measurement of the course and discussed the differences between the measurements just made. Pedro explained how to make the adjustments to the course and gave full details on how to prepare and document a course in a map. Certificates of participation were given to all participants.

## Items with special emphasis

a. The length of the calibration course, more than 300 meters but 500 mts . as ideal. No more than 2 counts difference for the 300 mt . course.
b. SPR Shortest possible route, with the high density of traffic on Mexico extra precautions has to be on place to have a good course measurement. This was clear demonstrated on Sunday's measurement. They have to ride in the shortest possible route no matter what.
c. Nice agreement between each measurement, measure the course at least twice with minimal difference between each measurement.
d. Document your job on a good map.

## Conclusion

a. The seminar was well organized and the facilities couldn't be any better
b. The participants demonstrated their interest on the seminar; practice will account for the deviations on the calibration course and math mistakes.
c. Looks like the FMA wants to establish some kind of quality control over the more serious events that are willing to have the course certify, they should work closely with the America's administrator.
d. The shortest possible route has to be in the measurers mind all the time.

## Special thanks to Luciano and Maximo for looking to all seminars details and the lunch at El Rey Del Cabrito. Also the Tequila was great.
